INTRO

Your Physique will mainly be replicated by what you eat, not just training hard.

Ever wondered why people who train hard and have done for years still make no progress.. you guessed it!

What I want to give you here is a full breakdown around nutrition from all aspects so you can manage it the best way you can every single day.

You know I'm a coach who believes in enjoyment and this means meals out, freedom to enjoy your favourite foods and not being super restricted.

of course, this has its place and working towards a physique goal will require sacrifices and priorities.

YOUR GOALS

When it comes to reaching a physique goal, it's simple - your goal must be reflected on what you eat!

99% of the time, we tend to work towards three different goals

1. Losing weight = calorie deficit
2. gaining weight = calorie surplus
3. Maintaining weight = maintenance calories

Over the next 3 pages I'm going to go more into depth about those 3 and how to nail each one!

TIP 1 - BE CAREFUL OF EXTRA INTAKE
SUCH AS COFFEES, SAUCES, OILS ECT

CALORIE DEFICIT

As we know, a deficit comes when you're looking to shift body fat and lose weight, usually with the aim of bringing definition and vascularity to life.

The main things we need to consider are:

1. Keeping a high protein intake in order to maintain muscle mass
2. If there is a desired time frame, which in turn will decide on how aggressive the approach is.
3. How to manage hunger, as let's be real it will occur in a dieting phase.
4. Managing socials - eating out, drinking, coffee meet ups
5. How long you can maintain the phase whilst keeping an eye on fatigue and recovery.

MAINTENANCE

A maintenance phase usually occurs when coming out of each phase or when there is no goal in sight, but it can be very effective if done right!

The main things to consider here are:

1. how responsive the body is, especially when coming out of a diet
2. Making it a gradual process and not adjusting to maintenance calories within one day.
3. That this doesn't need to be lengthy, it's only there to prepare for the next phase.

CALORIE SURPLUS

Finally, a calorie surplus occurs when a person is looking to gain body weight and in turn gain muscle mass!

The main factors we need to consider here are:

1. Be prepared to gain body fat, which will result in definition being lost
2. To be comfortable with being uncomfortable, as calories will be high.
3. training as a priority, in which nutrition will aid that to grow sufficient muscle mass
4. remaining satiated throughout the day, eating every 2-3 hours.
5. high protein intake - 3g per kg of bodyweight

YOUR MACROS

PROTEIN	CARBS	FATS
1 GRAM = 4 CALS	1 GRAM = 4 CALS	1 GRAM = 9 CALS
EG - TUNA, CHICKEN, STEAK, MINCE, EGGS	EG - POTATOES, RICE, FRUIT	EG - AVOCADO, OILS, NUTS, DARK CHOCOLATE
FUNCTION = PROVIDE BUILDING BLOCKS FOR MUSCLE GROWTH & RECOVERY	FUNCTION = MAIN SHORT TERM ENERGY SOURCE FOR THE BODY	FUNCTION = MAIN LONG TERM ENERGY SOURCE THE BODY

YOUR MACROS

THE BEST TIPS TO USE:

1. KEEP PROTEIN TO A MINIMUM OF 2G PER KG OF BODYWEIGHT AT ALL TIMES
2. 4-5 MEALS PER DAY IS MUCH BETTER THAN 2-3 MEALS
3. 1L WATER INTAKE & ELECTROLYTES IS A GREAT WAY TO START YOUR DAY
4. CARBS ARE NOT THE DEVIL! JUST BE SMART ON HOW YOU USE THEM (E.G PRE & POST TRAINING WINDOWS)
5. UNSATURATED FATS HAVE A BETTER BENEFIT THAN SATURATED FATS
6. IF YOU ARE IN A DIETING PHASE, KEEP CARBS LOWER
7. THIS ALSO GOES FOR REST DAYS, AS YOU WONT NEED TO USE ENERGY AS MUCH AS A TRAINING DAY.

WEEKEND MANAGEMENT

WEEKEND MANAGEMENT

SET UP = CALS 2500 PER DAY = 17500 WEEKLY

MON	TUES	WED	THUR	FRI	SAT	SUN
2500	2500	2500	2500	2500	3200	2800

WEEKLY TOTAL = 18500

OVER BY 1000

CALORIE BANKING ↓

MON	TUES	WED	THUR	FRI	SAT	SUN
2500	2500	2500	2100	2100	3300	2500

DECREASED CALS BY 400 ON THUR & FRI TO
ALLOW ROOM FOR WEEKEND SOCIAL.

amazonbasics

Calorie banking is one way to manage your nutrition across the week in order to allow room for a sociable weekend - a meal out, a few drinks or just an off plan meal

It allows you to stay on track to put it in simple terms!

WEEKEND MANAGEMENT

Other effective methods I like to use are:

- Increasing your output such as 2k more steps or a longer cardio session.
- Ensure meals are prepared for the following day so you are straight back on track.
- Spirits & diet mixers when out and avoiding a high intake of beer and red wine as they are higher in calories.
- High water intake and electrolytes.

Just bear in mind, the more socials you have the longer your process will be... this isn't to say do not do them or enjoy them!

Just be realistic with your approach.

EATING OUT TIPS

Eating out can be where a lot of you go wrong..

Just because a plate may look 'healthy' it doesn't mean it is going to give you the benefits you require.

Restaurants, fast food, takeaways all add salt into their foods, sauces, spices, cook in fatty oil and then when you think you are eating well..

You have probably just gone over your calories by a good 400-500!

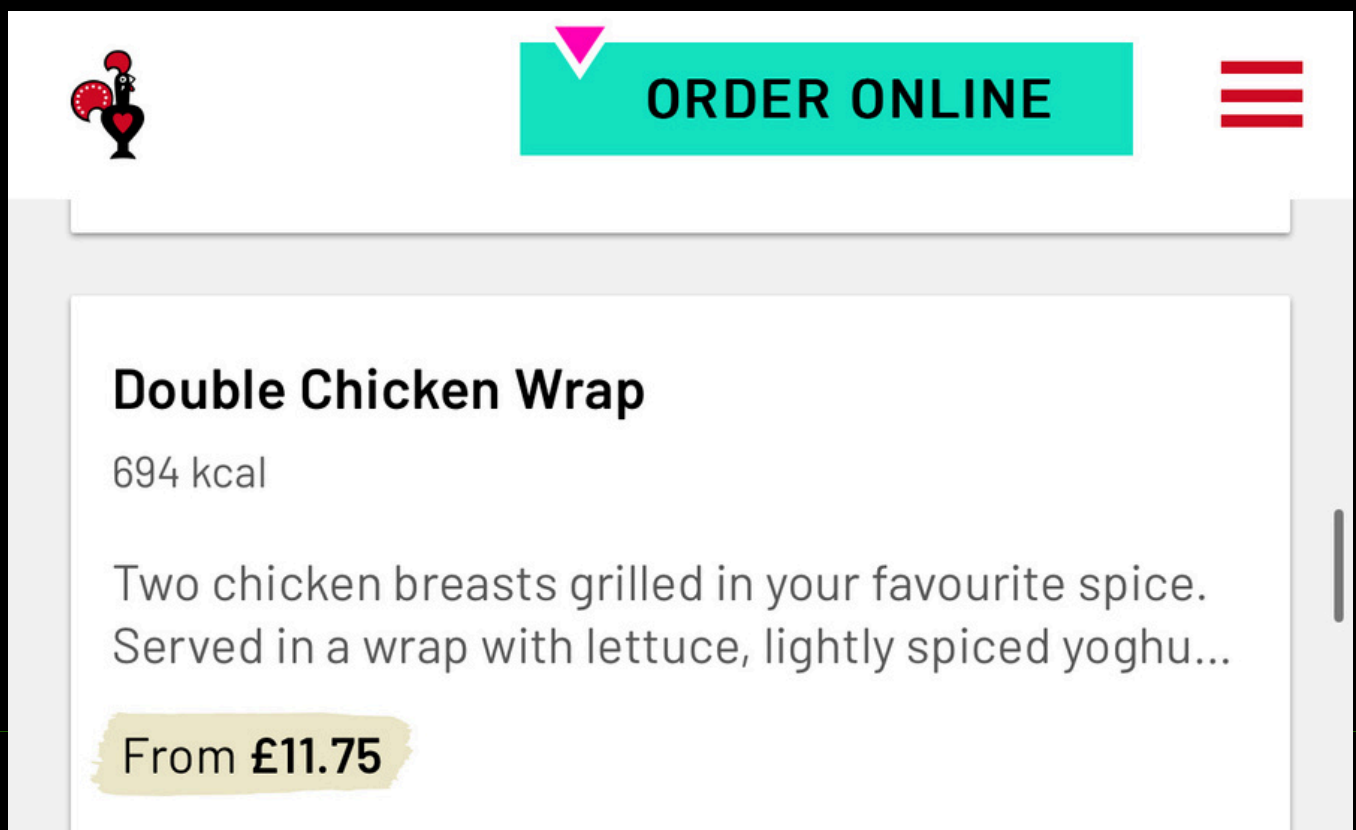

So, here are some effective ways on how to manage it whilst still enjoying your food when eating out...

EATING OUT TIPS

1. Plan Ahead - Look at the menu

E.G Nando's has all calories of everything on the menu, and although some find that this can cause bad food relationships it can be very beneficial to allow you to manage your calories and stay on plan!

EATING OUT TIPS

2. Pick a high protein order - Your crucial macro

Even for vegetarians, it can be pretty easy to find a high protein dish!

for non vegetarians, pick a meat source such as chicken, beef, pork, tuna, eggs

for vegetarians you can go down the route of veggie burgers, tofu, chilli

wagamama

hot-pots
hot-pots

vg v

tofu hot pot (vg)

a korean inspired broth with tofu, soft + silky tteokbokki, butternut squash, mangetout, bok choy, kimchee and red onion. finished with red chilli + a drizzle of chilli oil (529 kcal)

nutritional information

	per serving	per 100g
energy (kcal)	529	74
energy (kj)	2,218	312
protein (g)	15.56	2.19
carb (g)	90.59	12.73

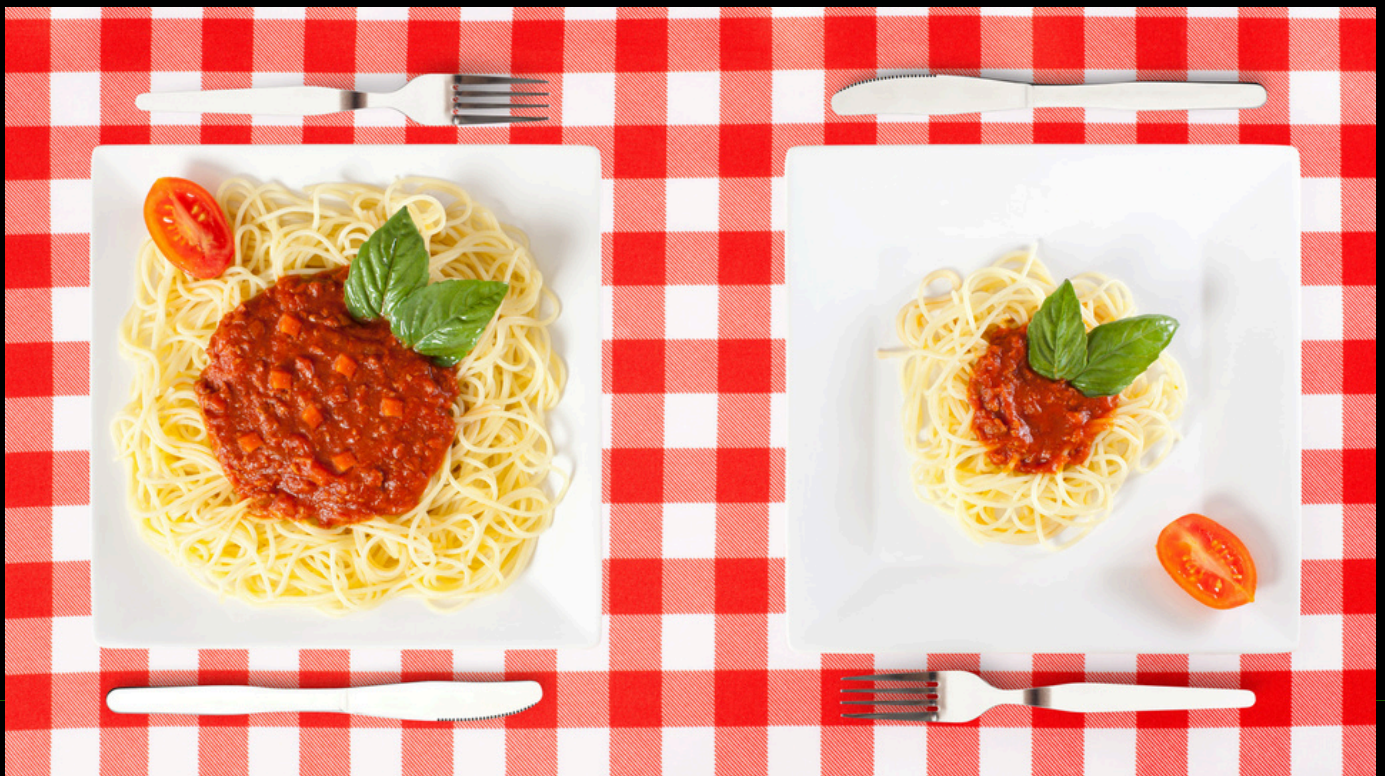

EATING OUT TIPS

3. Manage your portion sizes

Simply choose a smaller sized dish or you can even make the decision to share or take your food home..

Another way to control this is by only having one course instead of 2/3

EATING OUT TIPS

4. Overestimate by 25%

use this rule of thumb if the place is
without a menu!

simply put an estimate into myfitnesspal
and over estimate the calories by 25%

Dinner	1,123
Chips 1 serving large	480
 Your fat goal for today is 79 grams and this has 22.7 grams. >	
Burger Burger g, 100 gram	208
 This food is high in protein. >	
Coleslaw 1 cup	249
 This food has lots of Vitamin C. >	
Brioche burger bun Burger Bun, 1 bun	172
Lettuce 100 grams	14

CHOICES ON THE GO

Eating on the go can be challenging, especially when tempted by takeaways, subways in petrol stations, all the chocolate and unhealthy options we have at our disposal.

It is rare to find healthier food places than places that offer no nutritional value.

So, what I want to do here is make your life easier and allow you to be smarter when you have to eat on the go.

Sometimes, it may not be the case of being able to meal prep or have what you need on you and you need to be on it with what calories you have and how to manage them.

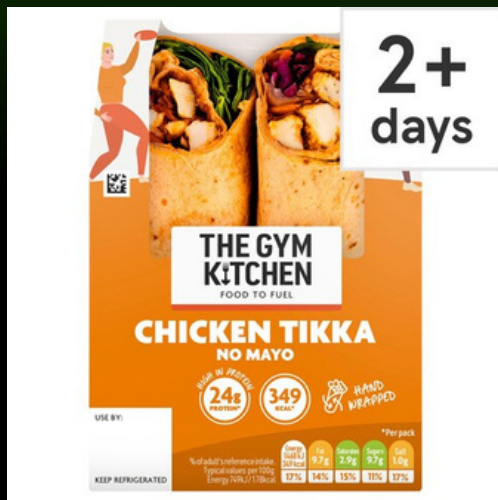

CHOICES ON THE GO

1.

MEAL DEALS

Here are some smart choices for the famous meal deal that you will be able to get at most places that offer them!

45G Protein, 450 calories and a tasty quick meal for you to pick up and have on the go!

Again, it is about being smart!

TIP - zero cal fizzy drinks are golden for dieting.

CHOICES ON THE GO

2. QUICK MEALS FOR DINNER

Ones for those with little time in the evening, you finish late at work or don't have time to go to the shops..

CHOICES ON THE GO

3. QUICK BREAKFAST IDEAS

Suitable for those that have early mornings, or may not be a huge breakfast fan!

	Total
Protein	34
Carbohydrates	73
Fiber	13
Sugar	26
Fat	15

Breakfast	558
Whey Per4m Protein, 30 g	102
 This food is high in protein.	>
Quaker Rolled Oats Quaker Oats, 50 g	188
 This food is low in saturated fat.	>
1 Banana. 1 Regular Banana., 118 g	105
 This food is low in saturated fat.	>
Blueberries Lidl, 100 g	42
Smooth Peanut Butter (20g) Kelkin, 20 g	121

Smoothies are so quick & easy to make!

This meal will take you a whole 5 mins of prep & consuming, perfect for those of you in that situation!

CHOICES ON THE GO

4. IDEAS SNACK CHOICES

Need something to keep your going, give you some energy or even boost your protein intake..

The great thing about these ideas are theyre good quality food sources

plenty of protein, easy to get from anywhere & not too high in calories!

MEAL TIMINGS

No matter what you hear, I want you to really take onboard that meal timings do have an importance!

Of course, there is some awful knowledge out there surrounding this but I want you take on these tips in order to help you!

1. Eating every 2-3 will allow you to remain satiated (feeling full) and therefore, reduce the risk of cravings
2. Regular eating also promotes healthy digestive patterns
3. Pre workout will depend on high GI or low GI but anywhere before 30 mins to 60 mins.
4. Post workout, replenish glycogen stores with a high carbohydrate meal
5. Intermittent fasting and eating before bed are optional. Just be aware of their pros and cons
